

Community Land Management Plan (Draft)

Operational Land 2026

Acknowledgment of Country

Adelaide Hills Council acknowledges that we undertake our business on the traditional Country of the Peramangk and Kaurna peoples.

We pay our respects to Ancestors and Elders past and present as the Custodians of this ancient and beautiful land, for they hold the memories, traditions, spiritual relationships, culture and hopes of the First Nations of Australia. We are committed to working together to ensure that Peramangk and Kaurna culture and traditions are sustained, valued and continuing. Together we will care for Country for the generations to come and in this context the decisions we make should be guided by the principle that nothing we do should decrease our children's ability to live on this land.

Introduction

Purpose of the document

Adelaide Hills Council (Council) has prepared a suite of six Community Land Management Plans (CLMPs) to guide the management of its Community Land (Land).

This plan relates specifically to community land categorised as **Operational Land**, including stormwater infrastructure, vehicle access control, closed landfills, walkways etc.

Other than where indicated the sequence of objectives, proposals and policies within Community Land Management Plans does not infer a hierarchy or order of priority.

What is community land?

Section 193 of the *Local Government Act 1999* (the Act) states that all land owned by a council or under a council's care, control and management, other than roads, is classified as community land unless the council has resolved to exclude it from community land.

Council may revoke the classification of land as community land provided it follows the process set out in the Act and the relevant steps set out in its [Community Engagement Policy](#).

Council is also able to exclude new land acquired from community land classification if it resolves to exclude the parcel(s) before it becomes local government land.

Community land is held for a range of purposes and is grouped into categories based on shared characteristics. Each category is managed under its own Community Land Management Plan.

Some operational land owned by Council, such as depots and offices, has been excluded from community land and is not subject to a Community Land Management Plan. Roads are not Community Land.

What are Community Land Management Plans?

CLMPs are management documents that are required by Section 196 of the Act to:

- Identify the land to which it applies; and
- State the purpose for which the land is held by the council; and
- State the council's objectives, policies (if any) and proposals for the management of the land; and
- State performance targets and how the council proposes to measure its performance against its objectives and performance targets.

If the council does not own the community land, i.e. it is held by the Crown, it has been bequeathed to the council or is held in trust by the council—it must ensure the CLMPs describe who owns the land, any trust, dedication or restriction that applies, and what, if any provisions the owner requires.

A management plan is required where:

- Portion of the land is, or is to be, occupied under a lease or licence
- Portion of the land has been, or is to be, specifically modified or adapted for the benefit or enjoyment of the community.

Register of Community Land

Adelaide Hills Council owns or has under its care and control over 300 parcels of Community Land for community benefit.

In accordance with Section 207 of the Act, Council maintains a register of its Community Land, recording key details about each parcel of land, including its legal description, location, size, ownership, and any leases or licenses over the land, such as who holds them, their duration, and their purpose.

A copy of the register is located on Council's [website](#).

Operational Land

Purpose for which the land is held

Land within the **Operational Land** category comprises walkways and access reserves which are largely maintained only to the standard of walking tracks, rather than formed or paved footpaths. These sites may not be suitable for all people. Lighting is not provided and the walkways are intended for daytime use only.

Operational Land held for controlling vehicle access is used primarily to enhance road safety. Most of these reserves are small and do not have amenity value. These parcels are ordinarily not fenced from the Road Reserve, often appear to be part of the road reserve and are usually maintained as part of the Road Reserve. These reserves are of two types:

1. Small sections of roads that have been closed to prevent through traffic on minor roads.
2. Narrow strips of land to prevent direct access from residential properties onto busy roads by requiring residents to exit their properties onto a feeder road before entering a major road.

Other land held for Operational Purposes may be used for the benefit of the community but have community access restrictions. This is comprised of land used for community wastewater management systems, quarries, operational compounds, waste management and resource recovery. Public access is only permitted under controlled conditions, as unrestricted public access would present an unacceptable level of risk.

Proposals for the Management of the Land

This management plan provides overarching context and guidance for the management of **Operational Land**, and details the relevant objectives, performance targets and measures.

Where required, site-specific management may be informed by detailed plans for individual sites.

Permits and Agreements

Operational Land will be managed in line with its primary purpose, as described in the relevant category.

Permits may be granted to adjoining landowners for vehicle access, allowing occupation of a portion of the adjacent reserve subject to internal assessment and review. Conditions will set vehicle access limitations.

Within **Operational Land**, permits, leases and licences for one or more of the following purposes (in no particular order) will be considered consistent with this Plan and authorised for the purposes of Section 202(3) of the Act:

- Review and implement relevant Council strategies, including the development of master plans and improvement plans to ensure our Operational Land continues to appropriately service the community.
- Collaboration with community to identify opportunities to activate portions of land not actively used for operational activities where it is safe to do so, for community education and community open space.
- Protect open space which provides a natural habitat and the protection and remediation of remnant vegetation where it has been identified.
- Investigate stormwater management to increase capacity to mitigate flooding and associated community impacts.
- Ensure leases, licences and permits on Operational Land are in place to benefit community, and to achieve optimal and sustainable operations.

Crown Land

Where Council is the custodian of Crown Land, the granting or renewal of leases and/or licences will be in accordance with the provisions of section 22 of the *Crown Land Management Act 2009*.

The activities of any lease, licence or permit on Crown Land must be consistent with the dedicated purpose of the land.

Any development on dedicated Crown land requires the consent of the Minister for Environment and Water (or delegate) before proceeding.

Commercial Activities on Community Land

Commercial use of community land may only occur where it is consistent with this Community Land Management Plan and authorised by Council in accordance with the Act. Community land is held for the benefit of the whole community, and any commercial activity must support community outcomes and not compromise the land's primary purpose.

Commercial use may be permitted where it:

- Aligns with Council's strategic plans and community objectives
- Is consistent with the purpose, objectives, and performance targets of the relevant land category
- Delivers a clear community benefit or complements existing community use
- Complies with relevant legislative, policy, and consultation requirements
- Maintains reasonable public access and amenity

Commercial leasing may support Council's financial sustainability by generating income that contributes to the maintenance and improvement of community facilities, reducing reliance on ratepayer funding.

Other considerations

Significance to Traditional Custodians

The Adelaide Hills Council area is traditionally the land of the Peramangk and Kurna people. Community land retains heightened significance to these peoples, containing some of the few areas of their traditional lands that remain publicly accessible.

Whilst the heritage status of this land is subject to the *South Australian Aboriginal Heritage Act 1988* as administered by the South Australian Government, Council recognises that, as a living culture, heritage and cultural history is often passed as oral history through generations and local knowledge may not always be gleaned through standard research methods. Council values the role of traditional custodians in contributing to heritage knowledge in managing this land.

Accessibility and Community Land

Adelaide Hills Council is committed to improving inclusive access across its community land. While many areas are accessible, the region's natural terrain and vegetation mean that some conservation areas and informal recreation spaces - including certain tracks and trails - are not currently accessible to everyone. Consistent with Council's *Strategic Plan* and *Disability, Access and Inclusion Plan*, Council adopts a strategic, evidence-based approach to planning and prioritising accessible sport and recreation opportunities and facilities. Council will continue to seek opportunities to enhance accessibility where feasible, while responsibly protecting the area's natural and environmental values.

Hazard Risk and Mitigation

Council may declare any community land to be closed to the public on any day when fire conditions are forecast to be or to become Extreme or Catastrophic, with the exception of any land that may be designated by the South Australian Country Fire Service as a Bushfire Safer Place or a Last Resort Refuge site.

Community Land may be closed during or following heavy rainfall and flooding events, for activities that are or may be deemed detrimental to infrastructure and to minimise risk to community.

Council may also declare any community land to be closed for the following purposes:

- Carrying out and following a controlled burn
- Following an emergency
- Where a control agency has taken temporary control over the land
- Feral animal control
- Contamination risk or threat

Vehicle Access to Community Land

Vehicle access is provided where appropriate on unformed land. Vehicle access is limited to authorised uses, including Council-approved contractors and events, statutory authorities, emergency services, existing legal rights of way, and temporary permit holder access where no alternative exists and no damage or safety risk will occur.

Disclaimer

Council has taken all reasonable steps to ensure the accuracy of the information provided; however, it may not always be complete, correct, or up to date, and Council accepts no responsibility for any loss arising from reliance on it. The Community Land Management Plans sit alongside Council By-law No. 3 and do not replace it, which means the by-law continues to apply at all times. Any reference to a Council decision or action includes decisions made by authorised Council staff, unless the plan specifically states otherwise.

Objectives, Performance Targets and Measures

Operational Land

The table below outlines Council's Objectives, Performance Targets and Measures for community land designated as Operational Land. The purpose of this table is to set overarching targets for the performance of Operational Land with the aim of ensuring that this land meets Council and Community expectations. The target is the goal or standard to be aimed for or reached; whereas the measure is how the Council proposes to determine whether the target/objective has been reached. Objectives under *Activation* are strongly aligned with the Local Government Association of South Australia's Valuing Social Outcomes framework.

Objective	Performance Target	Measure
Stewardship To sustainably manage our <i>Operational Land</i> in an environmentally responsible way.	1. Environmental impacts from activities on <i>Operational Land</i> are actively mitigated. 2. Natural functions are incorporated into infrastructure on <i>Operational Land</i> where appropriate.	1. Number of avoidable reportable incidents are progressively minimised. 2. Sustainable practices and design elements are incorporated, where practicable, into scheduled upgrades to improve water quality, drainage and runoff and support surrounding biodiversity. This could include development of wetlands/swales, stormwater quality improvements and erosion control measures.
Delivery To manage the extent and condition of our <i>Operational Land</i> infrastructure to meet long-term Council and community needs.	1. The <i>Operational Land</i> portfolio is sustainably maintained whilst supporting ongoing service delivery and adapting to changing community use. 2. Renewal is in line with Council's strategic and asset management plans and is offset by any fees and user contributions. 3. Access is effectively managed to maintain operational integrity and personal safety	1. Regular review of asset condition, utilisation levels and lifecycle costs to inform decisions about retention, renewal, repurposing or disposal. 2. Annual review of any fees and user contributions is conducted, to inform asset renewal costs in <i>Annual Business Plan and Budget</i> process. 3. Positive results observed in service performance data and compliance audits. 4. Capacity assessments and asset mapping are undertaken in conjunction with development planning information.

Objective	Performance Target	Measure
Activation Where appropriate, support community access to and engagement with <i>Operational Land</i> for compatible passive recreation use and activate <i>Operational Land</i> through the granting of leases, licences and permits.	1. Permit safe public access to suitable areas of <i>Operational Land</i> for passive recreation activities. 2. Where appropriate, Community Land and facilities are activated through leases, licenses, permits and hire arrangements for purposes consistent with the Plan.	1. Explore opportunities for increased passive recreation on <i>Operational Land</i> and identify these areas with signage promoting safe community access. 2. Regular inspections and assessment of how the Land and facilities are being utilised for operational activities and passive recreation, to inform future activation opportunities. 3. Review of current land uses and vacancies to identify opportunities for contemporary and commercial tenure arrangements.

Appendix A - Land Identification Details

This CLMP applies to the following parcels, further information is included in the Community Land Register which can be found on Council's website. Over time it is expected that this list will change should Council acquire new parcels of land, due to any sale of land, or changes to title references and changes to tenant details. Please refer to the Community Land Register for the current list of parcels that this CLMP applies to.

Land that is subject to a dedication under the Crown Land Management Act 2009 is held by the Council for the purpose for which it was dedicated as set out in the Council's Community Land Register and in the land identification section of this CLMP.

Operational Land CLMP

Activation on Land key:

- (L) Available or existing leasing/licensing (including community and commercial and sub-hire arrangements, consistent with Crown Land or Trust Dedication and relevant Council policy).
- (P) Permit (granted for temporary activation)
- (H) Hire
